

BIG DATA MEETS SUPPLY CHAIN

A supply chain solution delivering descriptive, predictive, and prescriptive analytics based on your private data and Paradata's authenticated Golden Data.

Overall analysis and risk assessment. Expose supply risks like end-of-life, part availability and more.

Receive prescriptive insights that enable you to make timely business decisions to manage the margin and health of your product over its lifecycle.

Evaluate product cost against market prices to identify opportunities for reducing material costs.

Your product delivery team can jointly improve your product's health score, which is based on a configurable set of rules.

Your Bill of Materials is enriched with Paradata's publicly-harvested Golden Data within minutes after upload.

Offload time-consuming tactical work and allow your strategic sourcing teams to focus on higher value activities
