[Initial Presentation](#)

Basic Concept

As Is

1. AZ user enters a request for a New Material (pharma product)
   a. request contain a large string of abbreviations
   b. often have errors and issues
   c. about 25 of these a day
2. AZ Global Data Administrator reviews the NMR and enters it into Master Data system
   a. time consuming - 2-3 days to complete
   b. must derive 35 attributes from the one string

To Be

1. AZ user enters a request for New Material
2. Paradata uses our Trusted Discover rules engine to derive the 35 attributes from the large string
3. Global Data Administrator does a quick verification that it looks good
4. GDA submits to Master Data Admin for final approval
5. Good data goes into Master Data system in 1/10 the time
